STUDY COMMAND

APPLICATION ENHANCEMENT SPECIFICATION

Implementation brief for the existing Windows desktop application

Objective. Enhance STUDY COMMAND with document management, flexible study planning, progress tracking, study recommendations, customizable appearance, and reliable Windows reminders.

1. Document Management

- Support importing PDF and text documents.
- Organize documents into user-created categories.
- Extract text from supported documents and provide preview/opening functionality.
- Preserve original uploaded files.
- Allow documents to be associated with subjects and topics.
- Keep extracted information editable.

2. Study Planner

- Allow users to create and manage subjects, courses, chapters, modules, topics, subtopics, study tasks, notes, and deadlines.
- Support four topic statuses: Not Started, In Progress, Completed, and Needs Revision.
- Display completion percentages and progress indicators for individual subjects and overall study progress.
- Allow users to edit, reorder, prioritize, schedule, and revise topics.

3. Study Recommendations

- Base recommendations on upcoming examinations and deadlines, pending topics, topic priorities, previous study history, revision requirements, and available study time.
- Recommend daily study targets and identify pending or overdue topics.
- Keep recommendations editable and explain why a topic is being recommended.

4. Daily Study Schedule

- Default routine: wake up at 10:00 AM, begin studying at 10:30 AM, and sleep at 12:30 AM.
- Maximum focus duration: 30 minutes. All schedule timings must be customizable.

Time	Activity
10:30–11:00 AM	Study Session 1
11:00–11:15 AM	Break
11:15–11:45 AM	Study Session 2
11:45 AM–12:00 PM	Break
12:00–12:30 PM	Study Session 3
12:30–2:00 PM	Lunch and rest
2:00–2:30 PM	Study Session 4
2:30–2:45 PM	Break
2:45–3:15 PM	Study Session 5
3:15–5:00 PM	Free time
5:00–5:30 PM	Study Session 6
5:30–7:30 PM	Free time

Time	Activity
7:30–8:00 PM	Study Session 7
8:00–9:00 PM	Free time
9:00–9:30 PM	Study Session 8

5. Pomodoro Focus Mode

- Provide 30-minute focus sessions, 15-minute short breaks, and 30-minute long breaks.
- Schedule a long break after four completed focus sessions.
- Include start, pause, resume, reset, and skip controls.
- Provide session completion notifications and study history.
- Maintain timer accuracy while the application is minimized.

6. Windows Desktop Integration

- Launch automatically when Windows starts and run in the system tray.
- Send scheduled desktop notifications and continue reminders while minimized.
- Allow notifications to open the application.
- Provide controls to pause and resume reminders.
- Minimize to tray when the window is closed, with a separate application exit option.
- Prevent multiple application instances.

7. Appearance Customization

- Provide Dark Mode, Light Mode, and System Default.
- Dark palette: background #11110F, text #F1EEE5, borders #2F2E29.
- Light palette: background #F3F0E8, text #1A1916.
- Provide accent presets: Violet, Cyan, Emerald, Rose, Amber, and Slate, plus a custom HEX colour picker.
- Allow UI density selection (Compact, Normal, Relaxed), sidebar selection (Expanded, Collapsed), and corner styles (Soft, Sharp, Pill).
- Include live preview, instant theme switching, and reset-to-default functionality.
- Persist appearance preferences across application restarts.

8. Dashboard

- Display current date and time, today's study schedule, current and upcoming sessions, and daily study progress.
- Show completed and pending tasks, upcoming examinations and deadlines, study recommendations, and productivity statistics.

9. Data Management

- Use local-first data storage for documents, subjects, topics, schedules, completion records, notes, deadlines, study history, appearance settings, and notification preferences.
- Provide data backup, restore, import, and export.
- Do not require an account, subscription, or cloud dependency.

10. Implementation Requirements

- Continue using the existing project architecture and preserve working functionality.
- Implement functional controls rather than static UI elements.
- Maintain a secure Electron architecture and reliable background scheduling.

- Use centralized design tokens for theme management.
- Avoid unnecessary dependencies and handle application errors gracefully.

11. Testing and Delivery

- Test document management, study planning, progress tracking, Pomodoro timing, desktop notifications, Windows startup, system tray, dark and light modes, custom accent colours, and data persistence.
- Fix implementation errors before completion.
- Deliver the fully functional Windows desktop application and its installable Windows executable.
- Enhance the existing STUDY COMMAND project; do not create a replacement application.
